Patient History / Indication

What is a Gastroscopy

A gastroscopy is the passage of a small flexible, lighted fibrescope through the mouth into the stomach and allows your doctor to visually examine the lining of the oesophagus (gullet), stomach and duodenum (small bowel). This examination is achieved comfortably using intravenous sedation which is administered by a specialist anaesthetist.

You will be at the Centre for approximately 2 hours. The procedure takes 15 minutes approximately and an additional hour will be spent in the recovery area. It is essential for someone to pick you up and stay with you a minimum of 6 hours afterwards. You are not permitted to drive after your procedure for the remainder of the day. You can return to normal duties the following day. When you are booking in for your procedure you will be given detailed instructions and information for you to follow.

What is a Colonoscopy

A colonoscopy is a procedure which allows your doctor to visually inspect the inside of the bowel by insertion of a video flexible telescope through which painless operations such as sampling of the lining (biopsy) or removal of small tumors or polyps can be performed. This procedure is performed while under intravenous sedation which is administered by specialist anaesthetist. The afternoon before your procedure you will be required to drink bowel preparation specified by your specialist.

You will be at the Centre for approximately 2½ to 3 hours on the day. The procedure will take ½ an hour approximately and an additional 1½ hours will be spent in the recovery area. It is essential for someone to pick you up and stay with you a minimum of 6 hours afterwards. You are not permitted to drive after your procedure for the remainder of the day. You can return to normal duties the following day. When you are booking in for your procedure you will be given detailed instructions and information for you to follow.
